

One of our operatives intercepted the assassin listening to a shortwave radio broadcast, presumably picking up instructions from her commanders. Unfortunately, she caught on to us, and was able to escape with Jesse. In her haste she left behind a sheet of paper, but we can't make heads or tails of it, although I did manage to find an email having to do with it; you can access with code **sgw0027**. We were also able to get a copy of the broadcast on the frequency the radio was tuned to for that time period. Their pattern so far when talking about Jesse appears to indicate that the codeword would have something to do with computers.
